

Lab Goal : This lab was designed to teach you how to use a matrix to solve a tic tac toe game board.

Lab Description : Read in each values for a tic tac toe board. Evaluate the Xs and Os from the board to see whether X or O won the game.

Sample Data :

```
5
XXXOXXOO
OXOOXOXO
OXOXXOXO
OXXOXOXO
XOXOOXXO
```

of data sets in the file - 5

Files Needed ::

TicTacToe.java
Lab12e.java

Sample Output :

```
X X X
O O X
X O O
```

X wins horizontally!

```
O X O
O X O
X O X
```

cat's game - no winner!

```
O X O
X X O
X O O
```

O wins vertically!

```
O X X
O X O
X O O
```

X wins diagonally!

```
X O X
O O O
X X O
```

O wins horizontally!

algorithm help

The determineWinner method goes through the matrix to find a winner. It checks for a horizontal winner first. Then, it checks for a vertical winner. Lastly, it checks for a diagonal winner. It must also check for a draw. A draw occurs if neither player wins.

You will read in each game from a file and store each game in a matrix. The file will have multiple games in it.
