

Lab Goal : The lab was designed to help you review classes, objects, files, arrays, and matrices.

Lab Description : Read in each word from the file. Then, output the word as an hourglass.

Sample Data :

4
HELLO
CAT
A
DOGHOUSE

of data sets in the file - 4

Files Needed ::

FancyWord.java
Lab01b.java

Sample Output :

```
HELLO
 E L
  L
 E L
HELLO

CAT
 A
CAT

A

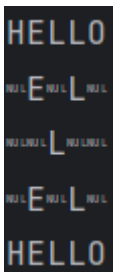

DOGHOUSE
 O  S
  G  U
   HO
   HO
  G  U
 O  S
DOGHOUSE
```

algorithm help

```
for(int i=0; i<word.length(); i++)
{
    mat[0][i] = word.charAt(i);
    //3 more statements
    //like the one I gave you
}
```

Note: ASCII code 0 represents a NULL character. Different IDEs output them differently:

IntelliJ

VS Code

```
HELLO
EL
L
EL
HELLO
```

jGRASP

```
HELLO
 E L
  L
 E L
HELLO
```

JCreator

```
HELLO
```

Nothing prints after the first NULL character!

The moral of the story is that you should replace all the NULL characters in the matrix with spaces. Technically, you're replacing all the 0 char values with 32s.
